DETAILED ACTION

Allowable Subject Matter

1. Claims 7-10, 13 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 7, the prior art of the record fails to show or fairly suggest a photic image processing method comprising wherein the first regulating compensation regulates and equilibrates said photic image signals of red, green and blue fundamental colors and compensates a lamp aging phenomenon of said photic image pick-up circuit.

Claims 8-10 are allowable for the reason given respect to claim 7.

Regarding claim 13, the prior art of the record fails to show or fairly suggest a photic image processing method comprising the steps of equally dividing said period of time into three segments, and multiplexing said 3 basic signals of red, green and blue fundamental colors in said three segments to obtain a multiplexed photic image signal alternately containing therein said 3 basic signals; outputting three compensation values at said three segments, each of said three compensation values compensating one of said 3 basic signals of red, green and blue fundamental colors at the corresponding segment in said multiplexed photic image signal; compensating said 3 basic signals of red, green and blue fundamental colors in said multiplexed photic image signal by multiplying respectively said three compensation values therefor to said second regulating compensation; and wherein the first regulating compensation regulates and equilibrates said photic image signals of red, green and blue fundamental colors and compensates a lamp aging phenomenon of said photic image pick-up circuit.
